Travis CI status: [Build Status](#)

Chapter 1. Introduction

In progress: event-sourcing app using spring-boot + spring-cloud-kafka + kafka-streams

Read [project reference documentation](#)

Initially generated by using [generator-jvm](#) yeoman generator (kotlin-parent-multi-project)

Chapter 2. Prepare kafka

install spring boot cloud CLI

```
brew tap pivotal/tap
brew search spring
brew install springboot

spring install org.springframework.cloud:spring-cloud-cli:2.0.0.RELEASE

spring cloud kafka

# check if zookeeper is running:
lsof -i:2181|awk '{print $2}'

# check if kafka is running:
lsof -i:9092|awk '{print $2}'
```

Chapter 3. CQRS and Event Sourcing API (commands, queries, errors)

Commands REST API

```
sealed class Error(override val message: String) : RuntimeException(message)
sealed class Command
sealed class Event
```

Chapter 4. Commands application

Including api project as included build using gradle composit builds approach

```
// file: settings.gradle
Unresolved directive in index.adoc - include::./commands-app/settings.gradle[]

// file: gradle/java.gradle
Unresolved directive in index.adoc - include::./commands-app/gradle/java.gradle[]
```

Commands REST API

```
@Configuration
class Rest {

    @Bean
    fun routes() = router {
        ("/").nest {
            contentType(MediaType.APPLICATION_JSON_UTF8)
            GET("/**") {
                val map = mapOf(
                    "errors" to listOf(
                        Error::class.java.name
                    ),
                    "commands" to listOf(
                        Command::class.java.name
                    )
                )
                ok().body(
                    Mono.just(map), map.javaClass
                )
            }
        }
    }
}
```
